

Perimeter Surveillance Solution

Close Gaps in Perimeter Security at a Price You Can Afford

Introducing the Betacom Perimeter Surveillance Solution, a turnkey offering that makes the nearly impossible possible. Airports, warehouses, and manufacturing plants all have vast properties to secure. Available CCTV technologies have proven sadly inadequate. Running new power and fiber is expensive and may not be viable due to environmental considerations. Data usage fees typically charged can be cost prohibitive. Now this multi-million-dollar problem is a thing of the past.

With the Betacom Perimeter Surveillance Solution, made possible by private wireless technology, you can experience affordable, reliable video detection along the entire perimeter of your premises. The solution combines both thermal and pan-tilt-zoom (PTZ) cameras with detection, tracking and notification technology. These devices transmit superior video feed and use artificial intelligence software that alerts your security team to a perimeter threat. The entire solution is packaged, installed, and managed by Betacom experts, and integration with your existing network video recorder (NVR) systems is included at no additional cost. Enjoy the peace-of-mind that you have complete visibility of your property, and your entire facility is fully protected. Hassle-free and affordable...at last.

Outdoor Surveillance that's Reliable and Secure

Private wireless is the most affordable, reliable, and secure connectivity on the market today. It enables unfailing connectivity indoors to many high-performance enterprises like airports, commercial buildings, warehouses, and manufacturing plants. Now, that same solution can close the security gaps in your outdoor perimeter surveillance.

Comprehensive Video Security

Perimeter cameras are connected wirelessly, even in hard-to-reach locations. Solar power can be incorporated if local power is not available. And integration with your existing surveillance and recording systems is included.

Hassle-free Deployment

You want a solution that gets the job done without the install hassle. Betacom is your expert wireless partner to design, install and manage the solution for you.

Accurately Monitor, Detect and Alert

You get better visibility and threat response with both thermal and motion cameras, accurate up to 1-mile. Artificial intelligence identifies credible objects of interest before sending an alert.

Affordable and Flexible

Unlimited data usage on your private network makes this the affordable option you never had. And you're backed by our Network Operations experts for end-to-end security.

Powered by Betacom 5G as a Service

Betacom 5G as a Service (5GaaS) is a private wireless solution provided as a turnkey managed service. The solution deploys rapidly and delivers reliable, superior bandwidth with low latency. 5GaaS sits behind your enterprise's firewall to connect business-critical devices and applications including IIoT devices, laptops, cameras, robots, and digital signage. With 5GaaS, your enterprise receives affordable wireless connectivity with reliable performance and none of the security concerns. Unlimited data rates make this the affordable surveillance solution you never thought possible.

Perimeter Surveillance Solution

Perimeter Surveillance Solution Benefits

- Full visibility with reliable and secure coverage
- Improved security; no more perimeter gaps
- Considerable cost savings over wired solutions
- Private wireless, solar, and outdoor camera infrastructure
- Affordable solution with unlimited data
- Integration with your existing surveillance systems

Perimeter surveillance powered by 5GaaS is ideal for airport complexes, warehouses and manufacturing facilities

High Performance for Your Business

The Betacom Perimeter Surveillance Solution is ideal for any industry application that requires accurate camera monitoring and response for large acreage properties or geographical challenges. Effective surveillance is finally within reach.

Airports

Airport security can mean more than a threat to property or equipment. These major transportation hubs are complex infrastructures and ecosystems with critical surveillance needs.

Warehouses

From buildings to storage lots, the expansive property lines of modern warehouse and logistics operations can be a security challenge. Cost-effective perimeter security is a business imperative.

Manufacturing Facilities

The type and scale of manufacturing facilities vary widely, from the expansive storage lots of automotive plants to the more compact but vital industrial manufacturer. Actionable perimeter surveillance is crucial.

Project Estimates Are Easy

With your property perimeter and specific network needs we can provide you with a basic proposal.

Step 1: Introductory call to determine your site perimeter requirements

Step 2: Initial recommendation on number and location of cameras

Step 3: Site survey to verify your exact solution needs

Step 4: Customized video surveillance design, private wireless RF design, and cost proposal delivered

Betacom Ticks all the Boxes

Betacom is enabling digital transformation for modern enterprises, exploring new options for high performance connectivity. The Betacom Perimeter Surveillance Solution, powered by 5GaaS, is a turnkey managed service providing complete visibility and protection of your entire business operation.

- ✓ Private and highly secure connectivity without in-house staff or stress.
- ✓ Improved surveillance for better visibility and security you can afford.
- ✓ Wireless technology that integrates with your existing systems.
- ✓ High speed and low latency performance.
- ✓ Flexible to accommodate discrete services and scale as needed.
- ✓ Best-in-class solution from a proven technology provider.
